Education

- **Lok Jagruti University Ahmedabad, Gujarat** Jun 2024 -Jun 2027
Bachelor of Technology : Computer Science Engineering
SPI : 6.6/10
- **Government Polytechnic Ahmedabad, Gujarat** Jun 2018 -July 2022
Bachelor of Technology : Computer Science Engineering
CPI : 8.0/10

Work Experience

- Intern – Android Application Development | Snapfix** Jul 2023 -Aug 2023
- Developed a responsive Android application for seamless product browsing and online purchasing with an intuitive and user-friendly interface.
 - Optimized application performance to ensure faster loading, smooth navigation, and an enhanced user experience across the platform.
 - Ensured compatibility and stable functionality across multiple Android devices and screen sizes through efficient testing and development practices.

Project

Image Classification System (Deep Learning) | Python, TensorFlow

- Developed an image classification system using deep learning models to accurately identify and categorize images into multiple classes.
- Trained and optimized CNN-based architectures on large datasets with preprocessing, augmentation, and performance tuning for improved accuracy.
- Built an interactive interface for real-time image prediction and visualized classification results with confidence scores.

E-Commerce Analytics & Recommendation Engine | Python, Pandas, Streamlit, Power BI

- Developed an end-to-end fraud detection system using machine learning to identify suspicious financial transactions with high accuracy.
- Engineered advanced features and handled imbalanced data to improve model performance, leveraging XGBoost for optimized precision and recall.
- Built an interactive Streamlit application for real-time fraud prediction and designed a Power BI dashboard to visualize fraud trends, risk distribution, and actionable business insights.

Music Player Web Application (Django) | Python, Django, HTML, CSS, JavaScript

- Developed a responsive music player web application using Django, enabling admin to upload, play, and manage songs with synchronized lyric display matching audio playback in real time.
- Built a clean, interactive UI with HTML, CSS, and JavaScript, and optimized media streaming with Django for efficient database management.
- Implemented synchronized lyric display functionality with real-time audio playback, enhancing user engagement and delivering an interactive music listening experience.

Technical Skills

Programming & Frameworks: Python, Java, Numpy, Pandas, Matplotlib

Machine Learning & AI: Machine Learning, Supervised Learning, Unsupervised Learning, Statistics

Tools & Platforms: FastAPI, EC2, S3, VS Code, Power BI, Jupyter Notebook, Prompt Engineering

Data Engineering: Data Acquisition (Web Scraping), Data Quality, Data Validation, Data Normalization

Analytical Skills: Statistical Analysis, Business Analysis

Certificate

- Exploratory Data Analysis for Machine Learning (IBM)
- Back-End Development with .NET (Microsoft)
- Introduction to HTML, CSS, & JavaScript (IBM)

Soft Skills

Problem Solving, Critical Thinking, Time Management, Adaptability and Creativity
